GLC Goes Green

# Environmental Problem

An Environmental Problem we have is Plastic Pollution. Plastic Pollution is when people throw too much plastic and it ends up on our roads and land.

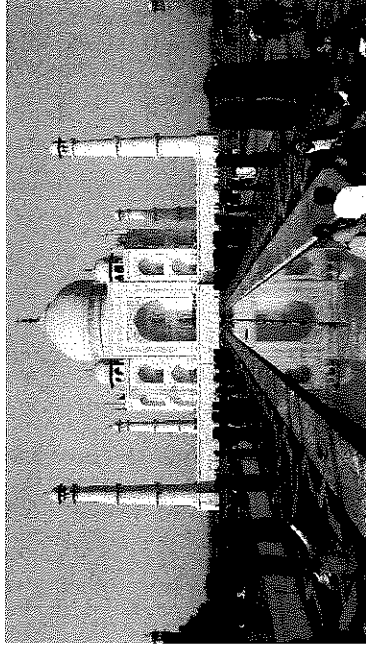

I believe that plastic pollution is a big environmental problem because people throw or litter their plastic and it washes up on our beaches. When the plastic washes up on our beaches it puts sea creatures' lives at risk because they think it is food and if they eat they can die.

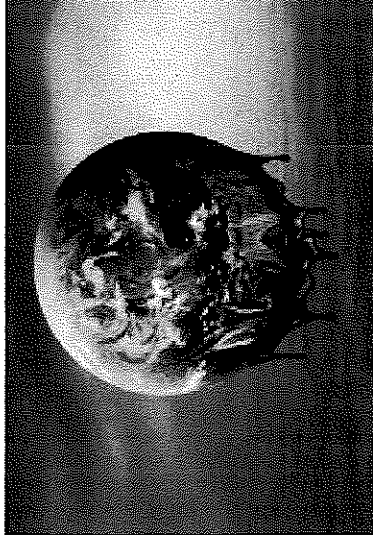

## *Main Point #2*

Another reason why plastic pollution is bad because it affects our buildings and lands. For example the Taj Mahal is becoming dirty because all the plastic pollution. When it gets dirty it means that there is too much pollution in our air and too much plastic in our oceans and lands.

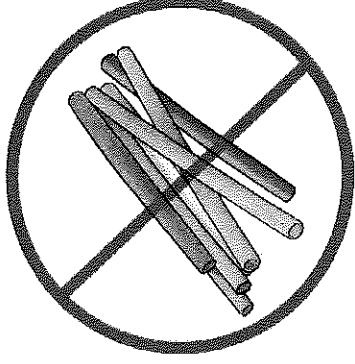

# Main Point #3

Another reason why I believe that plastic pollution is a big problem because Global Warming. Global Warming is getting worse and we need to stop it because it can put animals and humans life's at risk. So STOP plastic pollution and GO GREEN

# *Making Changes*

One way people are making changes is by making new life utensils or supplies that were made out of plastic but now they are not and they do this because they know that plastic pollution is bad and we need to stop it. Another way people stop plastic pollution is by announcing that plastic straws are banned for the people that live in that area.

# Environmental Problem: Pollution

**Pollution is terrible for the environment, the atmosphere, animals, and even humans.**

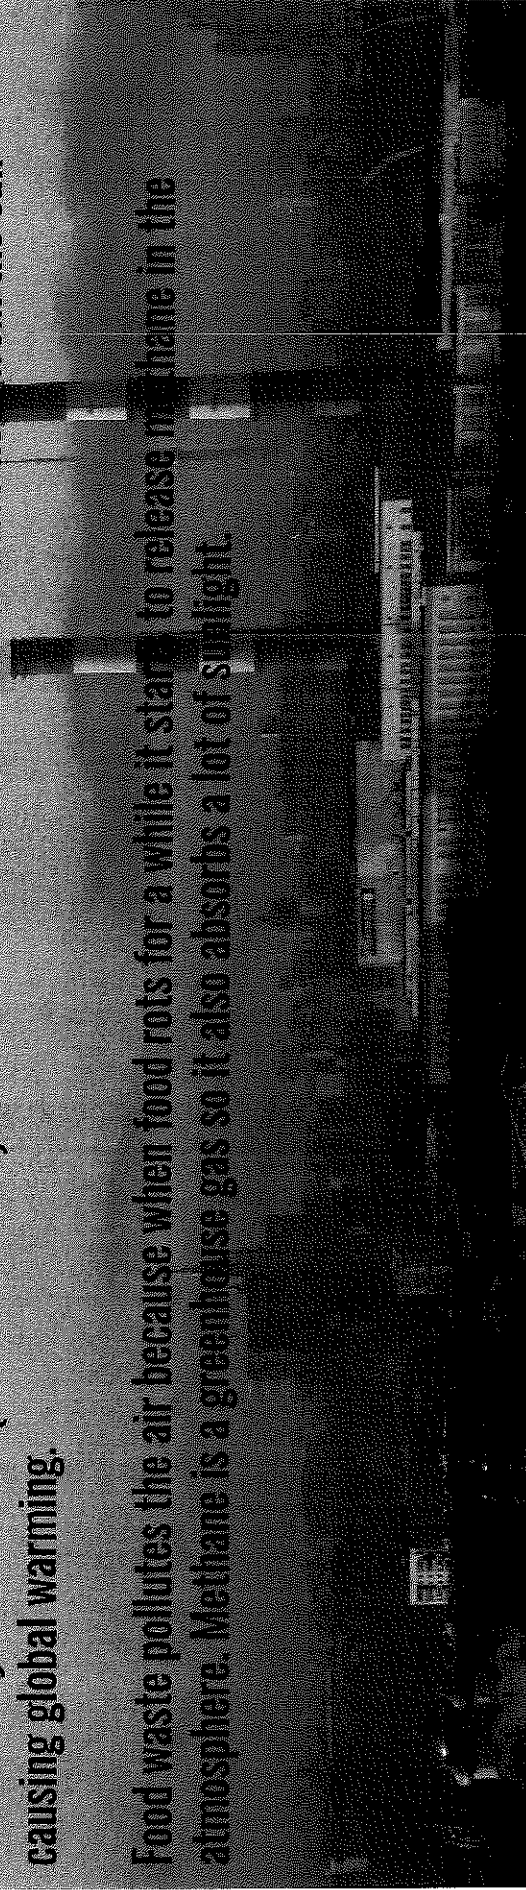

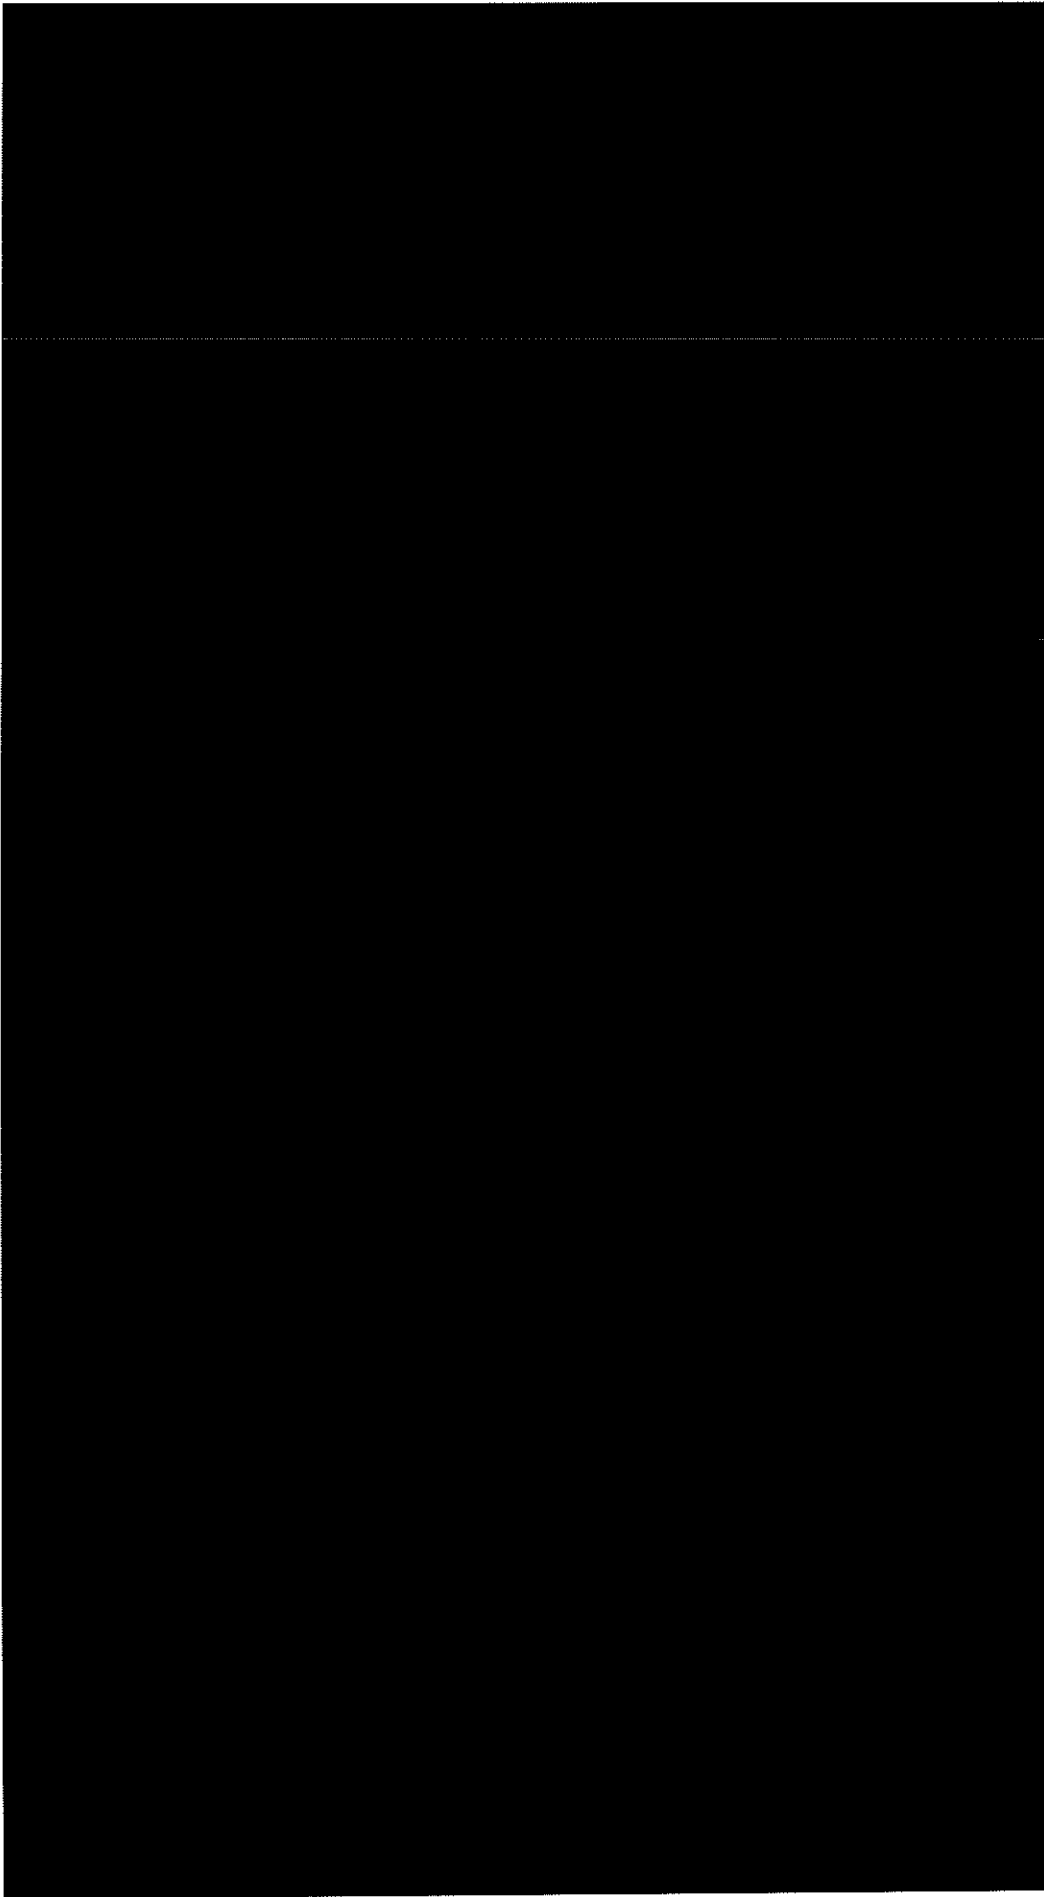

# Main Point #1: Air Pollution

Air pollution is caused when greenhouse gases are released into the atmosphere and the gases shrink the ozone layer causing global warming. The main causes of air pollution are fossil fuels and food waste. Places that have high amounts of air pollution have less breathable air.

Fossil fuels (coal, oil, natural gas, ect.) pollute the air when they are burned. When they are burned they release  $\text{Co}_2$  (Carbon Dioxide) in the air. Then the  $\text{Co}_2$  absorbs more heat from the sun causing global warming.

Food waste pollutes the air because when food rots for a while it starts to release methane in the atmosphere. Methane is a greenhouse gas so it also absorbs a lot of sunlight.

b6  
b7C  
b7D

Pollution is a problem in many different ways. Fossil Fuels create greenhouse gasses that warm the globe and poison the atmosphere. Instead of recycling, we just throw their plastic away. Most of that plastic goes into the ocean. That plastic can harm animals that eat it. And plastic and the

It may be a little difficult to see the connection, but, after all, should you not be a little more careful about the food you eat? The food you eat is the fuel for your body. If you eat a lot of junk food, your body will be like a car that is running on bad gas. It will be full of potholes and it will be hard to drive. If you eat a lot of healthy food, your body will be like a car that is running on good gas. It will be full of energy and it will be easy to drive. So, if you want to be healthy, you should eat a lot of healthy food. That's the connection. The food you eat is the fuel for your body. If you eat a lot of junk food, your body will be like a car that is running on bad gas. It will be full of potholes and it will be hard to drive. If you eat a lot of healthy food, your body will be like a car that is running on good gas. It will be full of energy and it will be easy to drive. So, if you want to be healthy, you should eat a lot of healthy food. That's the connection.

28 million people in the United States who like to go out and enjoy the outdoors. And that's why they're looking for ways to stay healthy and active. That's why they're looking for ways to stay healthy and active. That's why they're looking for ways to stay healthy and active.

# Making Changes

Pollution is terrible for almost everything on this planet. There are some people that want to solve problems that were made by pollution. This is a list of the solutions that can solve these problems.

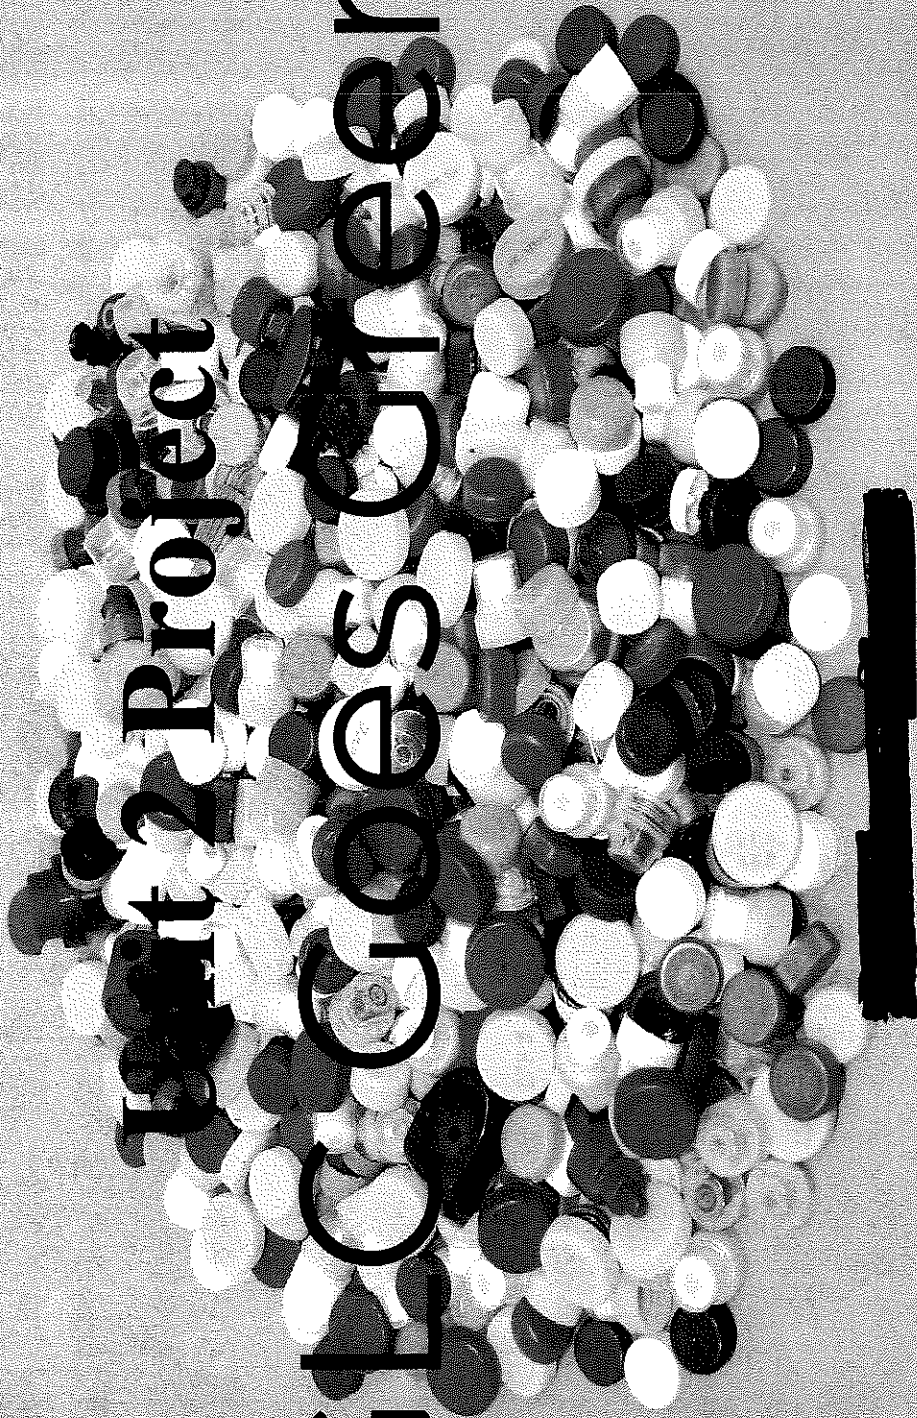

Air pollution solutions: An architect named Stephano Boeri had an idea to build buildings with plants and trees growing on them to solve China's smog problem. I think this is a good idea because most plants take in Co<sub>2</sub> and convert it into oxygen. Also food will grow on the plants and it'll reduce food waste.

# Lat 2 Project GLC Goes Green

# Environmental Problem: Plastic Pollution

I chose this problem because it cause other kinds of pollution such as air,water,and will most likely cause a massacre of dead animals everywhere. It will get worse if we don't stop this monster!

## Main Point #1

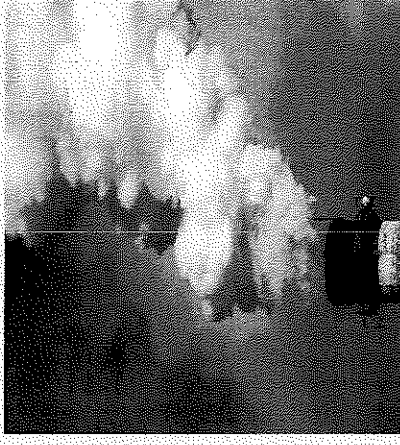

This is going to sound horrible but we might have to say goodbye to plastic straws! Yes they do cause the poor animals to die on a quest for food. More than 1 million marine animals die every year because of them! That's a lot of animals. You wouldn't want to see that would you? There are other environmental friendly straws but I don't want to sound like an ad!

**NO  
PLASTIC**

## Main Point #2

Oh look a new factory and now more than 13.7 million bird deaths everyday. Yep you aren't losing it. 13.7 million birds die every day due to air pollution and do you know what causes that? Plastic! The evil plastic did to my fellow bird friends. You see every summer day there might be 3 bird deaths in my backyard and my yard is safe so there is only one explanation. Air pollution which is caused by plastic!

## Main Point #3

Why did the plastic bottles jump into the ocean? They were put there by people. Great another crime of plastic! Water bottles are not reusable to some people. Unlike me and you they probably don't know what that does to our beloved animals that live under the sea!

# Additional Research

- Smoking causes air pollution
- Turtles eat too much plastic
- Marine life mainly eat plastic
